## DETAILED ACTION

### *Allowable Subject Matter*

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art taken alone or in combination fails to anticipate or fairly suggest the limitations of the independent claims 1 and 4, in such a manner that a rejection under 35 USC 102 or 103 would be proper.

Regarding independent claims 1 and 4, Slobodin (6334685) teaches the state of the art of color separating device (color modulating device 22, fig. 7A) in which a motor co-rotates first, second and third color wheels (color wheels 82, 84 and 86, fig. 7A, col. 5, ln. 7-27).

But, Slobodin fails to explicitly teach the color separating device comprising a second reflective wheel unit comprising a plurality of color separating reflective wheels, the plurality of color separating reflective wheels arranged with respect to the rotary shaft in the circumferential direction at equal intervals and configured so as selectively to reflect or to transmit incident lights of the light from the light source which are not transmitted through the first reflective wheel unit, the plurality of color separating reflective wheels being at a predetermined distance from the first reflective wheel unit in an axial direction of the rotary shaft, a third reflective wheel unit comprising a plurality of color separating reflective wheels, the plurality of color separating reflective wheels arranged with respect to the rotary shaft in the circumferential direction at equal intervals, facing the color separating reflective wheels of the first reflective wheel unit, and configured so as selectively to reflect or to transmit incident lights of the light which is transmitted through the first reflective wheel unit, the plurality of color separating reflective wheels being at a predetermined distance from the second reflective wheel

unit in the axial direction of the rotary shaft; and a fourth reflective wheel unit comprising a plurality of color separating reflective wheels, the plurality of color separating reflective wheels arranged with respect to the rotary shaft in the circumferential direction at equal intervals, facing the color separating reflective wheels of the second reflective wheel unit, and configured so as selectively to reflect or to transmit incident lights of the light which is transmitted through the second reflective wheel unit, the plurality of color separating reflective wheels being the third reflective wheel unit in the axial predetermined distance from direction of the rotary shaft, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
